

Crews Middle School

Science, Technology, Engineering, Arts & Mathematics

Students who participate in the STEAM program will be placed on a team where teachers work collaboratively to plan lessons that are cross-curricular and challenging in nature. Students may also participate in Connections classes that support the STEAM initiative such as Fine Arts, Technical Education, or Computer Science.

All students can participate and be successful on a STEAM program. This program is designed for any students who love math and science, who are motivated, curious, and love to explore new ideas. Students should also be able to show initiative and be enthusiastic about learning.

The STEAM program is a rigorous program that is intended to span all three years of middle school. We will accept all interested students unless there are more applicants than there are spaces available, in which case a random lottery system will be used to determine enrollment.
