

Poinsettia Care Instructions

Homewood is proud to offer you the freshest poinsettias all grown here in our greenhouses. To care for your plant, please follow these guidelines:

- Avoid exposing plants to extreme cold. Your vehicle should be warm for transporting.
- Place your plants in a room with sufficient natural light to read fine print. Poinsettias will droop and may develop yellow leaves if the light is too low.
- Water thoroughly when the soil surface is dry to touch. Do not leave plants sitting in excess water.
- In the home, avoid drafts or excess heat from fireplaces, appliances, radiators, or ventilating ducts.
- To prolong color and longevity, room temperatures should not exceed a day time temperature of 74°F and not below 60°F at night.
- Poinsettias are not poisonous and research indicates that they are not harmful to people or animals. However, it is not recommended that they be eaten.

If you have questions about your Homewood-grown poinsettia, please call us!
